CHECKLIST

CHEMTECH
JANUARY 1985

Education's our business 8 ☐ An earmark of a profession is its effort to educate its own. Here **Passer** introduces some who do the job for chemists and tells what they do.

Humanizing the scientist and simonizing the humanist 12 ☐ As we sally forth into the future, it's inappropriate to do so with an army divided into two opposing camps. **Schwartz** suggests how to undo what troubled C. P. Snow.

Invention, imitation, and (especially) innovation in Japan 18 ☐ When one of the top science and technology writers, working on one of the top magazines, looks at Japan, it pays to look with him. Here's the conclusion of **Casement**'s essay, begun in November.

The competitive arena 25 ☐ "I have seen the future and it is now." That's **Peterson**'s caveat.

A lesson in economics 28 ☐ It's tough to control a system sensitively when feedback is delayed and control variables are interdependent. That's the economy; **Solow** suggests how to calm it.

Reports from the International Trade Commission 31 ☐ There's an information wellspring at which you can quaff freely before your business goes overseas, and **Michels** will lead you to it.

Beyond psychic numbing 34 ☐ The human can adapt psychologically to almost anything. "But to *this*?" asks **Lifton**. And sadly, answers, "Yes."

Pricing and product life cycle 40 ☐ The only relationship that selling price has to production cost is that the former must be larger than the latter. Ah, but how much larger? **Frey** helps answer.

Synergistic research 44 ☐ Here's what you get when you team a mineralogist (**White**) with a pharmacist (**Hem**) on problems involving uses of clay. And it happened in a university yet.

Predicting carcinogenicity from structure 48 ☐ This special case of structure–activity relationship can be instructive in general and lifesaving in particular. **Helmes, Sigman,** and **Papa** explain.

Synthetic pulp 54 ☐ Replace wood-based paper with that made from oil? Isn't that bucking the back-to-nature trend in resource management? Sure is, unless synthetic pulps are special. That's the quality **Rave** explores.

1 The Industrial Chymist ☐ in which **Luberoff** belabors linguistics.

2 Write On ☐ in which is commentary on our math, cooking, and finances.

4 Heart Cut ☐ in which **Piccolini** and **Casper** show a live microphage, a promonomer, and some razzle dazzle instrumentation.

64 Chemistry Plus ☐ in which **Szmant** breaks down costs your project will have to pay . . . if you're lucky.

OBC The Last Word ☐ in which **Mueller** describes the turbo-encabulator.

Volume 15, No. 1, pages 1–64 ISSN 0009-2703 CHTEDD

CHEMTECH (ISSN 0009-2703) is published monthly by the American Chemical Society at 1155 16th St., N.W., Washington, D.C. 20036. Second-class postage paid at Washington, D.C., and additional mailing offices. POSTMASTER: Send address changes to Subscription Services, P.O. Box 3337, Columbus, Ohio 43210.

Subscriptions—1-year prices: Members, $24; Nonmembers (individual personal use), $35; Companies, institutions, libraries, $175; Student members, $12; Foreign postage $6 additional/year. Air freight add $25. Send payment to ACS Controller, 1155 16th St., N.W., Washington, D.C. 20036. Single copies, $15 (current), $19.25 (pre-1984). Phone orders can be placed for printed, microfiche, and microfilm editions by calling, toll free, the sales office at (1)(800) 424-6747 from anywhere in the continental U.S. Visa, Master Card, and American Express accepted. Rates above do not apply to nonmember subscribers in Japan, who enter subscriptions with Maruzen Co. Ltd., 3-10 Nihon bashi 2-chome, Chuo-ku, Tokyo 103, Japan; (03) 272-7211.

Editorial Matters: Refer all editorial matters to B. J. Luberoff, Editor, CHEMTECH, American Chemical Society, 1155 16th St., N.W., Washington, D.C. 20036.

Advertising: Centcom, Ltd., T. Koerwer, Pres., 25 Sylvan Road South, Westport, CT 06881; (203) 226-7131.

Service: For change of address, send old label with new address to ACS Membership and Subscription Services, P.O. Box 3337, Columbus, Ohio 43210. Allow 6 weeks to effect change. Refer claims for missing issues, information on status of accounts, etc., to this office. Claims for missing issues will not be allowed if (a) notice of address change was not received in specific time; (b) North American claim was made 90 days beyond issue date; (c) other claim was made one year beyond issue date.

Disclaimer—The American Chemical Society assumes no responsibility for opinions advanced by contributors to its publications. Views expressed in the editorials are those of the author and do not necessarily represent the official position of the Society.

Reproduction: To obtain reprint permission, contact Copyright Administrator, ACS, 1155 16th St., N.W., Washington, D.C. 20036; (202) 872-4367, TDD (202) 872-8733. For CHEMTECH articles copyrighted by ACS, free permission will be granted to make copies for personal, noncommercial, or internal use. This permission does not extend to copying for promotional purposes, creating new collective works, or resale.

CHEMTECH
FEBRUARY 1985

The Chemical Manufacturers Association 71 ☐ The trade group that represents our industry is explored by **Ingle** and **Lehrer** as it starts its second century.

Here come the microprocessors 74 ☐ How chipsmanship is practiced in England is disclosed by ***The Economist***.

Scoping the competition 76 ☐ In business as in football, blind-side clipping hurts. But in business it's legal. **Copulsky** explains how to avoid it.

Rethink strategies for buying and selling 82 ☐ Entry into the information age will offer rewards and challenges to those with the best technical information, says **Mayer**.

In favor of rational economics 86 ☐ Immediately ahead is a window of opportunity in economic planning. **Thurow** plans how best to exploit it.

The environmental top ten 89 ☐ Want to know who comprises the environmental power base? **Gilliam** introduces them.

Going over the edge 91 ☐ Here's an introduction to catastrophe theory as it applies to oil, among other concerns. It's taught by **Ashby**.

Energy facts: A basis for decision 94 ☐ Those who get lost in the numbers whenever energy concepts are discussed will find help in **Owsley** and **Bloomfield**'s translation.

Why do employees act the way they do? 100 ☐ Among the problems that **Goodfellow** addresses is the impact of a $300,000 robot that displaced two people and paid for itself in a year and a half.

Quality assurance pays! 108 ☐ "Quality assurance provides the evidence that quality control works." That's the thought **Ziegel** and **Knox** introduce.

On porous aluminum 112 ☐ **Morimoto** won Japan's coveted Technology Prize for this work.

Clean breaks and SEM 118 ☐ Repeating structural failures costs time and money, so it's important to examine why failures occurred in the first place. **Dahlberg** and **Zipp** describe how to take a close look at cracks and corrosion.

I wonder where the ligand went 123 ☐ Those organophosphorous ligands that make homogeneous catalysis so magic aren't as stable as we've believed. **Garrou, Dubois,** and **Jung** demonstrate and then worry.

Being right in spite of being wrong 126 ☐ Here's the fascinating history of the development of understanding of the displacement reaction as told by **Traynham**.

65 ☐ **The Industrial Chymist** in which **Luberoff** talks with a venture capitalist.

66 ☐ **View from the Top** in which **Roy** pleads for science that's of human dimensions.

68 ☐ **Heart Cut** in which **Casper** and **Piccolini** celebrate IEEE's centennial and riot control devices.

OBC ☐ **The Last Word** in which **Robinson** tells us where little computers come from.

CHECKLIST

CHEMTECH
MARCH 1985

An enterprising fantasy that came true . . . 138 ☐ I^2R is a company built on sensitive response to needs of customers and employees. Founder **Conlon** tells how it was done.

A professor comes to industry 142 ☐ It is possible for an academic to have a useful experience in industry. **Lanman** and **Runser** prove it.

Access all the information in patents 146 ☐ Those who take the trouble to understand the construction of patents can wring more insights from patents than framers of the Constitution ever dreamed. **Kaback** shows how.

Strategies for emerging global chemical industries 152 ☐ Out of the confusion of past decades **Shamel** models a reasonable future.

Energy R&D policy in the U.S. 156 ☐ Though many believe that in the decade following OPEC's oil embargo the U.S. had no energy policy, **Schriesheim**, looking at R&D, illustrates how we got where we are.

XDM: Photography updated 160 ☐ Fast it isn't, yet, but there is a commercially viable dry-process film that contains no silver. Here's a status report by **Vincett** et al.

Chemical technology of microelectronics 168 ☐ As chips get ever smaller, traditional chemical techniques are being replaced. Explore this challenge with **Larrabee**.

Organic synthesis by holistic electrochemistry 178 ☐ How an inventor invents is illustrated by **Baizer** in his description of how he's "taken the path less traveled."

To solve the problem, analysis must start with the problem 183 ☐ Too often chemical—and other—analysis has a kind of waste disposal mindset: "How shall we use this method?" **Pardue** and **Woo** say the question should be "How do we solve this problem?"

Solid-state investigations via NMR 186 ☐ Now you can "place" the atoms in most any sample, even the whole body. **Dybowski** explains how.

129 ☐ **The Industrial Chymist** thinks he sees light at the end . . . or is it the beginning? . . . of the tunnel.

130 ☐ **The Winner** in which **Marchessault** comes out ahead.

132 ☐ **Heart Cut** in which there's an announcement of significance.

136 ☐ **View from the Top** in which **Oreffice** confronts the lawyers but not the law.

158 ☐ **However . . .** in which **Noether** reviews "The Apocalyptics" and finds it extreme.

175 ☐ **Random Samplings** in which **Hahn**, joined by **Meeker**, lines your bookshelf with a select statistics collection.

OBC ☐ **The Last Word** in which **Flory** gives peers what they deserve.

CHEMTECH
APRIL 1985

Partly baked ideas 200 ☐ A soufflé of ideas on the verge of collapse comes out of Mensa by **Good**.

Why are you laughing? This is SCIENCE! 203 ☐ What humor has to do with what we do is examined by **Bodner** (with an epilogue about the funnies in CHEMTECH by its Editor).

The existential pleasures of technology 206 ☐ Here is introspection for fun and profit according to **Florman**.

America's Strategic Defense Initiative 211 ☐ Here are the technological challenges of Star Wars laid out by Colonel **Friel**, who's responsible for their development.

Using space 214 ☐ "The United States government will provide a climate conducive to . . . private sector . . . involvement in . . . space activities." That's policy. What it implies is explored by **Culbertson**.

Ceramics heat up 221 ☐ Doing dramatic things often requires working in hostile environments. **McLean** and **Whalen** describe ceramics that tame those environments.

Chemicals with power 226 ☐ Instead of the heat that most chemical reactions produce, why not make them produce electricity directly? **Langer** and **Colucci-Rios** show how.

Corrosion: An electrochemical problem 234 ☐ Outdoor degradation of metal structures is disgustingly expensive. Does **Mattsson**'s explanation of how it happens suggest new modes for prevention?

Look what you can make from methanol 244 ☐ Converting most of nature's carbonaceous stuff to methanol is easy. What you do next is laid out by **King** and **Grate**.

The British school of physical organic chemistry 252 ☐ How chemistry developed in the good old days is related by **Shorter**.

193 ☐ **The Industrial Chymist** in which **Luberoff** is to the point re Star Wars.

194 ☐ **Write On** In which we receive fan mail for the Turbo-encabulator.

196 ☐ **Heart Cut** in which **Kreps** and **Thyagarajan** lead the distilling.

218 ☐ **View from the Top** If **Pollock** has his way, computers will not do your next performance appraisal . . . or anything else a manager must do.

220 ☐ ***TECHGRAM**JAPAN* Now here's a useful new CHEMTECH feature!

OBC ☐ **The Last Word** And now a word for computer jocks.

Nobel fever or Where did all the technologists go? 264 ☐ Here's **Rowe**'s plea for replacing plaudits and prizes with practical products.

What's a consultant do? 270 ☐ To get answers, **Curry** asked a bunch of his colleagues. Here's what he learned.

Learn from the waters: Time, change, and technology in China 272 ☐ For a culture to develop a science or a technology it must accept a set of philosophical and sociological assumptions (about which we "never" talk because it is "foreign"). **Needham**'s explanation of Oriental thought along these lines is enlightening.

Real-world savvy and adaptability 280 ☐ A combination of these attributes is what *Esquire* Editor Moffitt credits with the success of achievers. **Morris** uses the concept to relate the interactions of marketing with R&D.

Strong property rights: Key to technology transfer 283 ☐ To survive, business must apply newly discovered concepts profitably. The time to do so internationally is provided by patent law, explains **Reding**.

Judge Pauline Newman: Bench chemist 286 ☐ A celebration of the service of one of our own on the U.S. Court of Appeals for the Federal Circuit.

Surfactants: Designing structure for performance 292 ☐ The marriage brokers of chemical reaction perform delicate but vital functions for which they must be designed with the understanding that **Rosen** provides.

Plastics that self destruct 299 ☐ An instructive case of "If you can't beat 'em join 'em" is provided by **Gilead**'s description of films for agricultural mulch.

A polymer that fights cancer 302 ☐ Here's one of those nice vicarious experiences—this one by **Breslow**—that enable technologists to survive their slumps.

Making a new C_{10} diamine 308 ☐ Combining isobutylene and acrylonitrile provides an interesting case of "ene" chemistry and a new product. **Drake** and company provide details.

Generate meaningful catalytic kinetics 316 ☐ Here's **Carberry**'s latest reactor for generating chemical and physical data.

257 ☐ **The Industrial Chymist** in which Conference Board conferees characterize modern R&D management.

259 ☐ **Heart Cut** in which **Bisio** celebrates the breadth of technology.

262 ☐ **View from the Top** in which **Gibian** reveals multinational attitudes.

269 ☐ ***TECHGRAM Japan*** in which are gleanings of interviews with Japanese technologists.

OBC ☐ **The Last Word** provides that needed respite from those taxes you just paid.

Page 283

Getting along with the boss 330 ☐ Any relationship is strengthened when the parties make each other feel good about themselves. **Levinson** suggests ways that work at work.

Lease or buy 334 ☐ If you don't know five different reasons for leasing the equipment you want, you had better read **Taylor**'s overview.

Glass of the past 340 ☐ Tracing the history of the charms of glass illustrates how chemical products can be developed without knowing—even today—their intimate chemistry. Glassmaker **Moretti** leads us through his industry, which has special charm for chemists.

A tale of two fibers 345 ☐ Creating artificial silk exemplifies how desired properties are developed by adjusting the interaction of physics and chemistry. **Morawetz** and **Mark** tell how Carothers and co-workers did just that.

Apply the membrane advantage 348 ☐ The capital–energy trade-off of many separations is often optimal when membrane technology is employed. **Gooding** shows how to do the evaluations.

Scale up biotechnology safely 356 ☐ How fermentation that produces human insulin is done safely is taught by **Muth**.

A Trojan horse for pests 362 ☐ **Fukuto** describes how chemicals that pests eat turn into chemicals that "eat" pests.

Pheromones 368 ☐ Pheromones are the chemicals that make bugs make beelines. **Leonhardt** analyzes their analysis.

It need not be "feedstock *or* food" 376 ☐ How to make chemicals from those kinds of biomass that people can't eat is described by **Phillips**.

321 ☐ **The Industrial Chymist** makes an absolutely preposterous proposal . . . or is it?

322 ☐ **Write On** in which the way that weapons, economics, and environment interact gets attention.

324 ☐ **View from the Top** in which **Grace** reports on his commission's probe of how government spends our money.

326 ☐ **Heart Cut** in which **Kreps** and **Thyagarajan** write of skin disease and gibberellic acid.

337 ☐ **The Division's Page** in which JACS Editor **Bard** speaks for the analytical chemist.

375 ☐ ***TECHGRAMJapan***

OBC ☐ **The Last Word** in which are facts you didn't even know you'd missed . . . but do you need them?

Volume 15, No. 6, pages 321–384 ISSN 0009-2703 CHTEDD

CHEMTECH (ISSN 0009-2703) is published monthly by the American Chemical Society at 1155 16th St., N.W., Washington, D.C. 20036. Second-class postage paid at Washington, D.C., and additional mailing offices. POSTMASTER: Send address changes to Subscription Services, P.O. Box 3337, Columbus, Ohio 43210.

Subscriptions—1-year prices: Members, $27; Nonmembers (individual personal use), $38; Companies, institutions, libraries, $199; Student members, $13.50; Mexico and Canada add $6/year for postage. Europe add $10/year for postage. All other countries add $17/year for postage. All foreign subscriptions are sent by air freight. Send payment to ACS Controller, 1155 16th St., N.W., Washington, D.C. 20036. Single copies, $17 (current), $19.75 (pre-1983). Phone orders can be placed for printed, microfiche, and microfilm editions by calling, toll free, the sales office at (1)(800) 424-6747 from anywhere in the continental U.S. Visa, Master Card, and American Express accepted. Rates above do not apply to nonmember subscribers in Japan, who enter subscriptions with Maruzen Co. Ltd., 3-10 Nihon bashi 2-chome, Chuo-ku, Tokyo 103, Japan; (03) 272-7211.

Editorial Matters: Refer all editorial matters to B. J. Luberoff, Editor, CHEMTECH, American Chemical Society, 1155 16th St., N.W., Washington, D.C. 20036.

Advertising: Centcom, Ltd., T. Koerwer, Pres., 25 Sylvan Road South, Westport, CT 06881; (203) 226-7131.

Service: For change of address, send old label with new address to ACS Membership and Subscription Services, P.O. Box 3337, Columbus, Ohio 43210. Allow 6 weeks to effect change. Refer claims for missing issues, information on status of accounts, etc., to this office. Claims for missing issues will not be allowed if (a) notice of address change was not received in specific time; (b) North American claim was made 90 days beyond issue date; (c) other claim was made one year beyond issue date.

Scale up biotechnology safely

Page 356

CHEMTECH
JULY 1985

The alchemist's contract 394 ☐ The role of chemistry in the first of the collectibles is related by **Duthy**.

People, ideas, and innovation: A time for change 398 ☐ As **Affleck** stepped down as its chairman, he looked into Cyanamid's corporate culture.

Valued time 402 ☐ Time is not a renewable resource, so why not manage it accordingly? **Brisley** shows how.

. . . and the meek shall not be the entrepreneurs 408 ☐ Entrepreneurs expect the unexpected. But to do so they must first explicitly recognize what's expected. How you do that is explained by **Welsh** and **White.**

Viscosity at home 416 ☐ Just how slow is molasses in January? **Sutterby** gives a feel, over eight orders of magnitude, for an often critical parameter.

Taste ≠ flavor 420 ☐ Only when all the senses work together you taste flavor, notes **Appel.**

Discovery and development: The case of a rodenticide 424 ☐ The story of bromethalin, related by **Dreikorn** and **O'Doherty,** illustrates well how chemistry and biology can be made to interact in the service of society.

Valid measurements: Key to decisions 431 ☐ Define zero pragmatically. Go ahead, try. That's the kind of issue with which **McKee** wrestles.

Dust 434 ☐ Finely divided solids are everywhere. They adhere, adsorb, explode, corrode, poison, and pollute. **Williams** and **Nosker** help you understand them.

Extraction with supercritical fluids: Why, how, and so what 440 ☐ Here's a state of matter we don't often think about. But it does have utilities, as **Hoyer** shows.

385 ☐ **The Industrial Chymist** asks why you've given up so much freedom.

386 ☐ **Write On** in which we hear from readers about nuclear winter and Star Wars.

387 ☐ **Division Page** in which a carnival of materials concepts is announced.

388 ☐ **Heart Cut** in which are hints on things breaking, foaming, and permeating.

391 ☐ **View from the Top** in which **Mahoney** says quality isn't everything, but it's way ahead of whatever is second.

401 ☐ **TECHGRAM*Japan*** in which there are holograms of internal organs and a glass for which opacity changes with applied voltage.

413 ☐ **Guest Editorial** in which **Carey** wonders who is educated . . . in 2001.

OBC ☐ **The Last Word** in which is your vacation insurance.

CHEMTECH
AUGUST 1985

Pictures worth a thousand words 460 ☐ Children's images of chemistry's role in society are depicted by their drawings, assembled by **Heilbronner** and **Wyss**.

The moral un-neutrality of science 462 ☐ Our culture's responsibility for the "other" culture is essayed by **Snow**—yes, that Snow.

Wandering through darkest abstracts 466 ☐ Real chemists don't speak CASese; **Rickter** teaches the language.

A study of cultural differences 472 ☐ In addition to Snow's "two cultures," we now have in business the differences between the Occident and the Orient with which to contend, as **Nishikata** explains.

A way to independence 476 ☐ Here's the business plan, according to **Grant**, that you need before launching your consulting practice.

Development of fenvalerate 482 ☐ Fenvalerate is the first of the commercial synthetic pyrethroid insecticides. **Yoshioka** relates how its improvement on nature was effected.

New materials from metal vapor chemistry 488 ☐ Atomic metal vapors: What could you do with them? If you could make them . . . **Ozin** can and suggests some answers.

Material aspects of semiconductors 497 ☐ Chipman **Pogge** challenges the chemical technologist.

Engine requirements for fuels and lubricants 504 ☐ **Baker** and **Shelef** explain how car and fuel manufacturers reach mandated fuel efficiency and lower emissions from cars.

449 ☐ **The Industrial Chymist** hurdles the industry–academe barrier.

451 ☐ **Write On** in which is more on waging peace and the turbo-encabulator.

453 ☐ **P.S.** has more about rain, and yes, Star Wars.

454 ☐ **Heart Cut** in which **Bisio** and **Allen** find interest in fluidized combustion under pressure, orphan drugs, and survival of the fittest molecules.

458 ☐ **View from the Top** in which **Crum** shares the ACS views on federal funding for chemistry and how it should be spent.

465 ☐ **TECHGRAM*JAPAN***

468 ☐ **Well Said!** in which **O'Hayre** introduces our serialization of his book, "Gobbledygook."

479 ☐ **The Division's Page** in which **Burns** describes how low-level wastes are about to create high-level problems.

OBC ☐ **The Last Word** in which we find typing ribbons of polyester film, fabric, and polyethylene.

CHEMTECH
SEPTEMBER 1985

A case of synergism 519 ☐ When academia and industry cooperate everyone gains, says MIT President **Gray**.

On chemicals and risks 522 ☐ How safe is safe depends on perception, expectation, and extrapolation—**Gehring** explains.

Acupuncture and moxibustion 528 ☐ The history of two ancient medical treatments is documented by **Needham**.

Who says you can't be creative? 534 ☐ **Arrigo** says everyone can.

Amorphous photovoltaics 538 ☐ The future of solar energy lies in reducing costs by improving efficiency. **Adler** and **Ovshinsky** show how it's done.

Making cars strong but light 550 ☐ High-strength steels account for plastics failing to affect cars as expected. **Cheng** explains.

Hollow-fiber ultrafiltration 558 ☐ Okochi Memorial Prize winners **Warashina**, **Hashino**, and **Kobayashi** trace the development of their system from concept to commercialization.

Saltwater crops 562 ☐ It's a mere historical coincidence that our crop plants need fresh water. **O'Leary** points to new opportunities.

Pulp with less pollution 568 ☐ Anthraquinone is the key. **Holton** and **Kutney** explain.

An asymmetric synthesis that's really general 572 ☐ Synthesize almost any chiral organic compound in 100% optical purity using **Brown** and **Singaram's** boronic reagents.

513 ☐ **The Industrial Chymist** in which **Luberoff** builds a team.

514 ☐ **Heart Cut** in which **Bisio** and **Dolbear** discuss motionless mixers and quick patent info.

518 ☐ **View from the Top** in which **Tregoe** puts responsibility for strategy where it belongs.

526 ☐ **Guest Editorial** in which **Wilson** describes the nuclear ignorance of students.

567 ☐ ***Techgram JAPAN*** in which we find artificial seeds, compact audio discs, and methodology.

OBC ☐ **The Last Word** in which **Stack** updates Lewis Carroll.

The Innovative Magazine SEPTEMBER 1985

CHEMTECH
OCTOBER 1985

Needed: Partnership 582 ☐ Whether governance should come down from above or up from the governed is an old American question, newly raised by **Boyer**.

Kinds of crude 585 ☐ Here's a graphic portrayal of what this oil business is all about.

OPEC . . . then 586 ☐ As OPEC teeters, it's fascinating to recall its origin, as **Lacey** did in his landmark book on Saudi Arabia . . .

. . . and now 588 ☐ . . . then to look at some recent press clippings.

Buying and selling businesses 591 ☐ Why would one firm want to acquire a business that another wants to unload? **Copulsky** explores this paradox.

Biotechnology: Licensing from the consultant 594 ☐ Some say that only lawyers get rich on biotechnology. **Williams** suggests that doing your homework now can help us avoid that situation.

A bevy of gimmicks 600 ☐ Would that we had more authors like **Atkinson**.

There are bugs in my oil well 602 ☐ Microbes are providing the latest promise of means to get that last bit of oil out of the ground, say **Donaldson** and **Grula**.

Formulating with computers 606 ☐ No school teaches about mixing things together so that they (a) do what you want and (b) don't react with each other. Using pesticides as his model, **Mookerjee** shows how the job is done today.

Advanced batteries 612 ☐ The temporal mismatch between energy supply and demand recommends **Brodd's** chemical solution.

Filtration, plant-scale 622 ☐ As we encounter more complex molecules, higher purity, and lower energy demands, solids separation problems become more urgent. Here's **Avery's** compendium on modern equipment.

Sewage sludge 632 ☐ It's only waste if we let it be waste. **Giordano** describes how TVA is making it a useful resource.

Making it with CO_2 636 ☐ CO_2 has been ignored as a source of carbon because its reaction rates are so low. Here **Darensbourg** and **Ovalles** tell us how to speed things up via transition metal complexes.

577 ☐ **The Industrial Chymist** in which **Luberoff** provides examples of techniques he'd like readers to provide.

578 ☐ **Heart Cut** in which **Bisio** and **Kreps** tell of separating materials and plastics technology.

581 ☐ **View from the Top** in which **Jasinowski** grades management.

596 ☐ **Well Said!** in which **O'Hayre** explores the truism "Language makes the rules; rules do not make the language."

605 ☐ ***TECHGRAMJapan*** in which methane's "dimerized" and cancer's tackled.

OBC ☐ **The Last Word** in which **George** explores the symptomology of psychosclerosis.

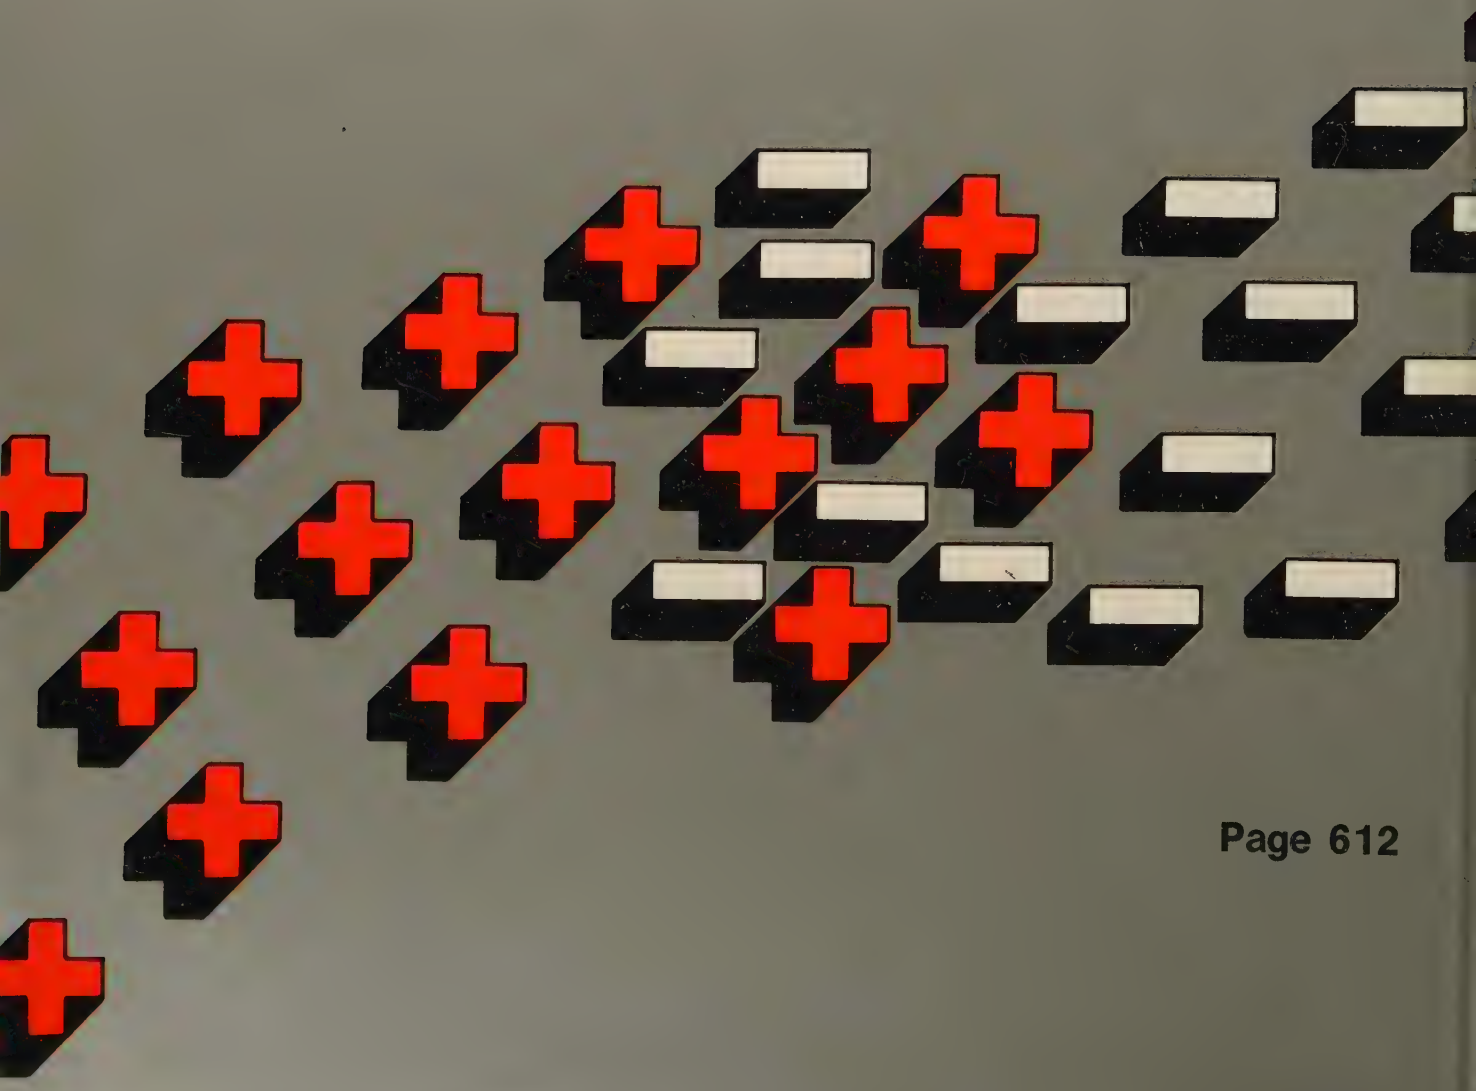
OCTOBER 1985



CHECKLIST

CHEMTECH

NOVEMBER 1985

A stockholder's view of mergers and acquisitions — 648 — Here's a case where management may not serve the stockholders' best interests, says **Pickens.**

Nothing but the best, and hang the cost — 650 — "Are the tasks that technical types do worth what we pay them?" asks **Rhodes.**

Chemical specialties vs. specialty chemicals — 652 — If you want to get into chemical specialties, you'd better learn about formulating specialty chemicals, cautions **Benoliel**.

The rejuvenation of chemical engineering — 655 — Is the education of chemical engineers adequately anticipating the future? **Wei** says it's beginning to do so.

A Soviet view of nuclear winter — 658 — That they, too, "know" is assured by **Aleksandrov.**

Networking in biotechnology — 666 — New sources of knowledge, yes; but have we new ways to assimilate it? **Wilson, Klausner,** and **Payson** answer yes.

"Heilbron" today — 674 — How the computer has affected Heilbron's "Dictionary of Organic Compounds" is chronicled by **Buckingham.**

Superconducting organic solids — 682 — One of the challenging opportunities placed before molecular architects by electronic applications is outlined by **Bechgaard** and **Jérome**.

Membrane mimetic systems that contain catalysts, semiconductors, and magnets — 686 — Colloids are a special state of matter, as illustrated by the vesicle systems in which **Fendler** is making wonderful things happen.

The discovery of titanium-catalyzed, asymmetric epoxidation — 692 — Growing concern about the biological fate of the "inactive partner" in useful D,L mixtures makes **Sharpless's** chemistry a bellwether of what's to come.

A history of free radical chemistry — 701 — "To discard a scientific model takes courage, integrity, and, more than anything else, a more useful model." **King** illustrates this universal truth.

641 **The Industrial Chymist** in which we revisit Dick and Jane.

642 **P.S.** in which we continue dialogue on several concerns.

644 **Heart Cut** in which **Bisio** and **Kreps** cover fluid states, tell how to protect IR optical systems, and describe the jet pump.

647 **View from the Top** in which **Heidrick** and **Struggles** present a composite of concepts.

672 **However . . .** in which **Noether** reviews books for giver and receiver.

680 **Guest Editorial** in which **Isenhour** asks if anyone's willing to pay the piper who turns out all that easily copied computer code.

OBC **The Last Word** in which **Spanjer** and **Bolarsky** publish and don't perish.

CHECKLIST

CHEMTECH

DECEMBER 1985

Jumping genes 712 — In reviewing this biography of Barbara McClintock, **Gould** teaches molecular biology and how to face scientific adversity.

"Do you still beat your wife?" and other interesting questions 716 — If you're not eliciting the answers you want, try rephrasing the question, say **Cassels** and **Johnstone**.

The joys of pondering 720 — How progress comes from chaos is related by **Walker**.

Mergers: Some work, some don't 724 — After analyzing how companies behave after combining, **Rosenbloom** provides some dos and don'ts.

Getting rid of nuclear debris 728 — "Before acquiring anything, figure out how you're going to dispose of it." This adage is now the focus of the nuclear power industry, into which **Mathews** and **Kurtz** provide insight.

Whither chemical information? 732 — On line is how information is transferred now. Here's what's coming, according to **Nelson**.

Biotechnology transfer: National security implications 734 — "The Department of Defense influences the setting and carrying out of policies that affect technology transfer." What else **Birkner** has to say concerns all of us involved in the flow of science.

The electron as commercial reagent 738 — From yarn to dyes to drugs: Making them and more electrochemically is what **Toomey** describes.

The cutting edge of electrochemistry 748 — Chemistry meets physics in photoelectrocatalysis, new electrodes, and elsewhere, notes **Vijh**.

Supporting the catalyst 756 — Catalyst supports are seldom inert. What they do and how is exemplified by the studies of V_2O_5 and TiO_2 carried out by **Wachs**, **Saleh**, **Chan**, and **Chersich**.

Separating aromatics 762 — No matter how one adjusts reaction parameters, aromatic substitution yields mixtures. **Zinnen**, **Hobbs**, and **Gembicki** take them apart by adsorption.

705 The Industrial Chymist thinks it's time we distinguished between left and right.

706 Write On in which ceramics and words draw comments.

707 Heart Cut in which **Piccolini** and **Kreps** cover phase transfer catalysis, tube arrays, and high-powered lasers.

711 View from the Top in which **Berg** pleads for technical literacy at the top.

731 *TECHGRAMJapan*

747 Out in the Plant in which **Silver** tells how to use zinc carboxylates.

767 CHEMTECH's 1985 Index

OBC The Last Word in which **George** challenges us to identify consumer products from their mandated labels.

Volume 15, No. 12, pages 705–768 ISSN 0009-2703 CHTEDD

CHEMTECH (ISSN 0009-2703) is published monthly by the American Chemical Society at 1155 16th St., N.W., Washington, D.C. 20036. Second-class postage paid at Washington, D.C., and additional mailing offices. POSTMASTER: Send address changes to CHEMTECH, Membership and Subscription Services, P.O. Box 3337, Columbus, Ohio 43210.

Subscriptions—1-year prices: Members, $27; Nonmembers (individual personal use), $38; Companies, institutions, libraries, $199; Student members, $13.50; Mexico and Canada add $6/year for postage. Europe add $10/year for postage. All other countries add $17/year for postage. All foreign subscriptions are sent by air freight. Send payment to ACS Controller, 1155 16th St., N.W., Washington, D.C. 20036. Single copies, $17 (current), $19.75 (pre-1983). Phone orders can be placed for printed, microfiche, and microfilm editions by calling, toll free, the sales office at (1)(800) 424-6747 from anywhere in the continental U.S. Visa, Master Card, and American Express accepted. Rates above do not apply to nonmember subscribers in Japan, who enter subscriptions with Maruzen Co. Ltd., 3-10 Nihon bashi 2-chome, Chuo-ku, Tokyo 103, Japan; (03) 272-7211.

Editorial Matters: Refer all editorial matters to B. J. Luberoff, Editor, CHEMTECH, American Chemical Society, 1155 16th St., N.W., Washington, D.C. 20036.

Advertising: Centcom, Ltd., T. Koerwer, Pres., 25 Sylvan Road South, Westport, CT 06881; (203) 226-7131.

Service: For change of address, send old label with new address to ACS Membership and Subscription Services, P.O. Box 3337, Columbus, Ohio 43210. Allow 6 weeks to effect change. Refer claims for missing issues, information on status of accounts, etc., to this office. Claims for missing issues will not be allowed if (a) notice of address change was not received in specific time; (b) North American claim was made 90 days beyond issue date; (c) other claim was made one year beyond issue date.
